Application/Control Number: 10/662,196

Art Unit: 3711

#### **DETAILED ACTION**

#### Oath/Declaration

The declaration is objected to under 37 CFR 1.63 as being an improper continuation application. The matter is claim 27 was not presented in the prior application. The declaration must be changed to reflect the additionally recited subject matter and state that this application is a continuation-in-part of Application No 09/760,215.

## Specification

The specification is objected to under 37 CFR 1.63(d)(iii) and 37CFR 1.78. The applicant has improperly stated that this application is a continuation of prior Application No. 09/760,215. Because this application adds additional disclosure (claim 27), it must be changed to a continuation-in-part application instead of a continuation.

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 19, 20, 23, and 26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Asakura et al (5,730,664) in view of Yamagishi et al (5,779,563).

Application/Control Number: 10/662,196

Art Unit: 3711

Regarding claims 19 and 26, Asakura discloses a core, an inner cover layer and an outer cover layer with dimples. The inner cover layer has from 25 to 40 parts by weight of a high specific gravity filler (col 4, table). The outer cover is softer than inner cover layer and has a Shore D hardness from 63 to 73 (fig 1). Asakura discloses dimples but does not disclose the percentage of dimples. Yamagishi teaches a cover comprising at least 60% dimples. Regarding claim 20, the core is solid. Regarding claim 23, the inner cover layer is made from ionomers such as Hi-milan 1557 and 1605, which are zinc and sodium ionomers, respectively (see Kato '568 col 8). One skilled in the art would have included a specific quantity of dimples to achieve the desired flight characteristics.

Claims 21 and 22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Asakura in view of Moriyama et al (5,713,802). Asakura discloses the invention as shown above but does not disclose a wound or liquid core. Moriyama teaches a core assembly comprising a wound and/or a liquid layer (col 2). One skilled in the art would have modified the core to achieve the desired shot feel of the golf ball.

Claim 24 is rejected under 35 U.S.C. 103(a) as being unpatentable over Asakura in view of Sullivan (4,884,814). Asukura does not disclose a blend of soft and hard ionomers for the outer cover layer. Sullivan teaches the use of hard and soft ionomers for cover layers. One skilled in the art would have modified the ionomer of the layer to achieve a more durable golf ball as taught by Sullivan.

Claim 25 is rejected under 35 U.S.C. 103(a) as being unpatentable over Asukura in view of Egashira (5,714,546). Asukura does not teach the use a terpolymer in the outer cover layer. Egashira teaches terpolymer ionomers for cover layers. One skilled

in the art would have modified the ionomer to achieve the desired spin properties as taught by Egashira

## Allowable Subject Matter

Claims 1-18 are allowed.

Claims 27 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Raeann Gorden whose telephone number is 703-308-8354. The examiner can normally be reached on M-F 9-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Greg Vidovich can be reached on 703-308-1513. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
